

# UPDATED CLINICAL PRACTICE GUIDELINE

## AIRWAY MANAGEMENT IN TRAUMA

### Summary of Changes:

- The Airway Management of Traumatic Injuries CPG and the Airway Management in PFC were combined into this joint CPG to reduce redundancy.
- Introduces SOAP ME (Suction, Oxygen, Airway, Pharmacy, Monitors/Machine, ETCO2 and other Equipment) acronym. SOAP ME is a reasonable approach to “cleaning up” airway management for patients with traumatic injuries.
- Discussion of resuscitation before intubation and the use of advanced airway adjuncts like supraglottic airways and video laryngoscopy were added.
