

Quarantine is a command function to separate and restrict movement of those exposed to a contagious disease without symptoms.

Designate Areas

- Designate well-marked, closed, separate living areas and bathrooms. If not possible, co-locate group in a closed, shared space and bathroom.
- Prohibit those quarantined from using common areas, including bathrooms, gym, or dining facilities.

Maintain Hygiene

- Ensure separate and adequate soap, water, and hand sanitation supplies and disposal for both those non-quarantined and quarantined.

Ensure Proper Handling & Disposal

- Provide separate feeding, laundry, and hazardous waste handling and disposal according to theater policy.

Limit Interaction

- Strictly limit number of non-quarantined personnel within quarantine area to bare minimum; only those providing health and welfare checks, delivering meals, handling waste and laundry.
